If you are making reservations over the phone please indicate that you are booking under the International Dental Congress in October. Book by September 14, 2011.

IDC 2011 Highlights
- Keynote Speakers:
  - Dr. Dan Ward
  - Dr. Katya Archambault
  - Domenico Cascione, MDT, BS
  - Pinhas Adar, MDT
  - Richard Napolitano, CDT
- IDC Cocktail Reception • ‘AGD Dentist of the Year’ Presentation
- 40 Commercial Exhibits
- NEW! Academy of General Dentistry Canadian National Meeting
Dr. Dan Ward is in private practice in Columbus, Ohio. He served as Assistant Clinical Professor at The Ohio State University for 13 years. He has lectured at the Post–Graduate Programs in Esthetic Dentistry at the University of Minnesota, SUNY Buffalo, UMKC, and the University of Florida and served as chief examiner. He is a fellow in the ACD, fellow of the ASDA, fellow in the Pierre Fauchard Academy, and a fellow in the AGD. Dr. Ward has researched and developed an innovative computerized method of smile design called the RED Proportion. His patented method of proportional smile analysis is helping to define an objective standard for dentists. An innovative pioneer, Dr. Ward combines theory with practical real world experience.

Dr. Katya Archambault has a dedication to surgical excellence and professional integrity that extends to her patients and her practice. She has been in practice for over 14 years; maintains a private practice in Warwick, Quebec and also practices in Washington, DC. She is teaching post graduated residents at the Queen Elizabeth Hospital in Montreal. She is the head of the Department of dental surgery at Arthabaska Hospital and has an extensive educational background in periodontics, prosthetics, gum surgery, TMJ disorders, implantology and oro–facial design. She is an active member of the Ordre des Dentistes du Quebec et Association des Chirurgiens Dentistes du Quebec. She is a member of the Estrie Dental society, the Academy of Osteointegration, International Congress of Oral Implantology and of the International Association of Orthodontics. Her main field of practice concentrates on soft tissue management, bone grafting techniques, regeneration materials and implantology.

Domenico Cascione MDT, BS carried out metallurgy research becoming a specialist in dental metallurgy. He was the owner and director of Dental Laboratory in Bari (Italy). He is a Master Ceramist and also is specialized in metallurgy, implant work and complex esthetic rehabilitation. He has been Research Associate and Program Director, Advance Training for Dental Technology at the Center for Dental Technology, the University of Southern California School of Dentistry. He became an Adjunct Faculty as a Clinical Assistant Professor at the University of Southern California School of Dentistry. He is also the Director of Case Design Center Laboratory a Division of Burbank Dental Laboratory, in California. He is a winner of award 2007 Judson C. Hichey in the research category, in the Journal of Prosthetic Dentistry. He is author and co–author of several articles in literature.

Pinhas Adar, MDT has thirty years of experience in all phases of dental laboratory technology. He is the founder of Adar International, Inc, a laboratory, educational and research company that is dedicated to setting a new standard in esthetics. He is past president of the Georgia Academy of Cosmetic Dentistry. He was on the PEC board of Aacd as program co–chair for 2011, an active member of the AAED and the International Oral Design group as well as numerous other organizations. He is on the advisory board of the Amara Institute and is on the editorial board of several dental journals. As a speaker, author, and entrepreneur Pinhas has achieved success in empowering both individuals and organizations. He is the creator of educational DVD’s, numerous magazine articles as well as a contributor to many chapters in dental esthetic publications.

Richard Napolitano, CDT is a graduate of Providence College, Providence, Rhode Island, and Durham Technical Institute, Durham, North Carolina. He is a national lecturer on all aspects of dental laboratory technology, treatment planning, implantology and dental techniques, and has been involved in study clubs throughout Southern New England. Mr. Napolitano is an allied member of the College of Prostodontists and the owner and CEO of Precision Craft Dental Laboratory in Providence, Rhode Island.

8:30am – 4:30pm
Room: The Pavillion
3-Day Hands-on Seminar

Oral Surgery for the GP: A Practical Approach
This course is designed for the general practitioner who wishes to perform his/her own surgery and who rarely refers cases to the specialists. It is a step-by-step presentation of numerous minor surgical procedures that the dentist can and WILL confidently perform in the office when this hands-on seminar is completed. The participant will perform a large number of procedures utilizing anatomical specimens. This course will demonstrate techniques that have been utilized and updated successfully for over 30 years.

Dr. Lawrence Gaum is an oral surgeon who maintains a private practice in Toronto, Ontario. He practiced Oral Surgery at the University of Pittsburgh and Wilmington Medical Centre. He is a former Associate in Dentistry, Faculty of Dentistry, University of Toronto where he taught for over 20 years. He has lectured extensively internationally, teaching his fellow colleagues oral surgery and anesthesia. He has published a text book and has released a surgical DVD for the General Dentist titled: “Oral Surgery for the General Dentist”. He is a member of several dental associations in Canada, United States and Europe. He is a staff member of St. Michael’s Hospital in Toronto and the Director of Global Professional Seminars.

Non-Member Registration Fee: $2295.00 + HST (*Includes a free copy of Dr. Gaum’s Book & DVD)
TIASC & AGD Member Registration Fee: $1895.00 + HST

Oral Surgery for the General Dentist & Oral Surgical Videos for the General Dentist

Oral Surgery for the General Dentist was conceived and written specifically for the general dental practitioner. Dental students are often inadequately trained in, and exposed to, oral surgery techniques while in school. This clinical, step-by-step manual simplifies and demystifies general, everyday oral surgical procedures and provides the knowledge needed to perform these procedures with competency. “Finally, a no-nonsense manual specifically written for the general dentist that actually teaches good ‘bread and butter’ general oral surgery in a step-by-step fashion accompanied by numerous color photographs.” –Dr. Charles Balaban, DDS, FADI

Oral Surgical Videos for the General Dentist is an exclusive DVD devoted to teaching the General Dentist numerous surgical procedures through the use of live videos. The videos will simplify and demystify oral surgery for the busy G.P. It is a must for dentists performing oral surgery in their practice. You can’t afford to be without it. Dental Students will benefit immensely from this presentation. You will be given the “Practical Clinical Facts”: and nothing but the facts. This is a “One of a Kind” surgical gem!

Prosthodontics 1001: Essential Advanced Prosthodontic Principles for the GP

Participants of this course will learn the various parameters of advanced Prosthodontic principles that are essential components of clinical general dentistry. Concepts of occlusion as it applies to natural dentition, removable prosthodontics and implant prosthodontics will be reviewed in detail. In addition, other occlusal diseases of non carious cervical lesions, management of parafunctional habits and use of splint therapies will be discussed as it applies to our patient base. Treatment decisions trees of clinical case scenarios will be reviewed to train the clinicians as to various treatment options to resolve isolated clinical problems related to prosthodontics. With an increase acceptance and applications of dental implants as a viable tooth replacement therapy, various categories of complications in implant dentistry will be reviewed according to the scientific literature with the desire to prevent these problems and failures.

Dr. Mark Lin, BSc, DDS, MSc, Dip(Prosth), R.C.D.C.  practiced general dentistry for 13 years then completed his post–graduate training in the specialty of Prosthodontics at the University of Toronto. He holds a part–time position as an Associate in Dentistry at the University of Toronto and serves as a surgical demonstrator in the post–graduate Periodontics department and staff at the Implant Prosthodontics Unit (IPU) in the graduate Prosthodontics department. He is currently conducting clinical research on the topic of “Advanced Anterior Implant Aesthetics” for his Master of Science thesis. In addition, he maintains a full–time specialty practice as a Prosthodontist with focus on full mouth reconstructions and implant surgery and prosthetics. He is a Fellow and Diplomate with the ICOI. He is also an Associate fellow and Fellow with the AAID. He is a graduate and Fellow with the Misch Implant Institute. Finally, he is a Diplomate with the ABOI, a designation that is earned by less than 20 dentists in Canada.

Mastering Materials for Today’s Economic Environment

In today’s economy, patients are demanding options which are more affordable, yet esthetic. Direct composite restorations are being increasingly utilized in many dental practices. Nano/hybrid composite materials provide improved wear characteristics, an excellent translucent appearance and the benefit of lower polymerization shrinkage stress. Glass ionomer materials are an esthetic alternative that offer fluoride release, no shrinkage stress and decreased post–operative sensitivity. The astute clinician must be knowledgeable about all the available direct restorative materials when treatment planning and understand the techniques necessary to produce consistent results. Products presented: Kalore, G–aenial Flo, Fuji II LC, Fuji IX, Fuji Triage, Equia, Cavity Conditioner, G Coat Plus, Fuji Liner.

Dr. Dan Ward  is in private practice in Columbus, Ohio. He served as Assistant Clinical Professor at The Ohio State University for 13 years. He has lectured at the Post–Graduate Programs in Esthetic Dentistry at the University of Minnesota, SUNY Buffalo, UMKC, and the University of Florida and served as chief examiner. He is a fellow in the ACD, fellow of the ASDA, fellow in the Pierre Fauchard Academy, and a fellow in the AGD. Dr. Ward has researched and developed an innovative computerized method of smile design called the RED Proportion. His patented method of proportional smile analysis is helping to define an objective standard for dentists. An innovative pioneer, Dr. Ward combines theory with practical real world experience.

Laser Dentistry is Revolutionary: A Commitment to Change
Since the discovery of the laser 40 years ago, not many clinicians have adopted the use of lasers due to the potential harmful side effects of heat. Since the advent of the fourth generation of lasers, which are non-heat producing due to water and air cooling, benefits of laser dentistry have attracted the attention of dentists. This presentation will demonstrate the versatility of such lasers in both soft and hard tissue applications that are utilized in operative dentistry, pedodontics, endodontics, periodontics, oral surgery, cosmetic dentistry, orthodontics, implantology and prosthodontics. It will illustrate superior patient comfort during and after dental treatments, as well as the newly FDA-approved pain management by using LLLT (Low Level Laser Therapy). It will include an introduction of how laser works, laser–tissue interactions, laser safety and regulation, and a synopsis of dental laser development. Participants will learn: A synopsis of laser development over the last 13 years; Laser–tissue interactions; The benefit of pain management by LLLT; The versatility of the fourth generation of lasers; Other benefits of using lasers; and Why laser dentistry is labeled as revolutionary.

Dr. William Chen has been in private practice for over 33 years. He is a Master of the World Clinical Laser Institute and an Educator of the Academy of Laser Dentistry. He was the chief investigator for Biolase Technology, Inc. in obtaining FDA clearance on laser root canal therapy and laser bone applications. His lectures take him worldwide. His honors and awards include: the Fellowship and Mastership of the AGD, Fellow of the ACD, and Fellow of the ICD. He is the author of the first comprehensive textbook of Waterlase applications, titled “The Clinical Applications of the Er,Cr:YSGG Laser Systems (An Atlas).”

Socket preservation and soft tissue allograft
An important aspect of dental implant therapy related to the pre-surgical treatment planning. The objective is to preserve as much bone as possible after extraction. The site preparation should start at the extraction time. The soft tissues options we have to correct defects around implants and natural teeth.

Dr. Katya Archambault has been in practice for over 14 years. She maintains a private practice in Warwick, Quebec and also practices in Washington, DC. She recently completed a postdoctoral residence program in implant dentistry at New York University, College of Dentistry. She is teaching post graduated residents at the Queen Elizabeth Hospital in Montreal. She is the head of the Department of dental surgery at Arthabaska Hospital and has an extensive educational background in periodontics, prosthodontics, gum surgery, TMJ disorders, implantology and oro–facial design. Dr. Archambault is a member of the Estrie Dental society, the Academy of Osteointegration, International Congress of Oral Implantology and of the International Association of Orthodontics. Her main field of practice concentrates on soft tissue management, bone grafting techniques, regeneration materials and implantology.

Small Diameter Implants…
10 years of success already but so misunderstood!

Isn’t it strange that in 2011 when we can send someone to the moon, we still cannot help edentulous patients to eat with secure dentures at an affordable price and with a painless procedure? Despite the fact that standard implants are the best solution for edentulous patients, it is still not affordable or feasible for a category of patients. Unfortunately over 80 % of our elderly edentulous patients fall in this category. This is where the new Mini-implant technique can help! With the new technique and teaching on Mini-Implants we can now attain a 97.5% success rate for stabilization of lower dentures. There is also much more then only stabilization of full dentures that can be done with Mini-Implants, such as removable partial prosthesis stabilization and fixed single or multiple unit. Each of these options of treatments will be presented with their success rate and technique. At the end of the lecture the dentist will be able to really see the Mini-Implants for what they are and evaluate if they can be helpful in their practice.

Dr. Bruno Lemay graduated from Laval University of Quebec in 1990, Dr Lemay practiced for 8 years in Val D’Or before returning to school at UCLA in Oral Biology. This is where he was introduced to the small diameter implants. In 2000, he started practicing in Palm Springs, California where he perfected his technique with small diameter implants and developed his own protocol to finally reach incredible success. In 2009, he started the Canadian Mini-Implant Institute specialized in the teaching of the mini-implant technique all around Canada. Since then he has been giving hundreds of weekend comprehensive training and wrote several articles in denturist and dental journals as well as being a guest speaker at the ADC convention last May 2010 in Montreal and at the denturist convention in Whistler and Manoir Richelieu in 2010 and Alberta denturist association in May 2011.

Contemporary Periodontics and Implant Dentistry:
“What Every Dental Hygienist (and Dentist) Needs to Know”

This seminar will cover a wide variety of contemporary topics in the areas of Periodontics and Implant Dentistry: Topics will include:

• The Periodontal Oral—Systemic Link
• Oral Pathology: Diagnosis Update
• Topical Antimicrobials in Periodontal Therapy
• Maintenance of Dental Implants
• Implant Dentistry: Possibilities and Limitations
• Interesting Case Presentations

Dr. Murray Arlin D.D.S., dip. Perio. F.R.C.D. (C) received his D.D.S. from McGill University in 1977. After a 1 year Residency in General Dentistry at the Jewish General Hospital in Montreal, he began his Post Graduate Program in Periodontics at the University of Toronto, graduating with his diploma in 1980. Dr. Arlin received his Membership and Fellowship in the Royal College of Dentists of Canada in 1981 and 1983 respectively. He has taught at the Undergraduate and Periodontal Post Graduate departments at the University of Toronto. Dr. Arlin received his training in Implant Dentistry initially in 1985 and since then has been actively involved in continuing education. He has placed and documented over 10,000 implants to date. He has lectured internationally and has authored many articles on Periodontics and Implant Dentistry.

Predictable Bone Grafting for Future Implant Placement

One of the main criteria for having successful surgical results in implant dentistry is to have adequate bone. When inadequate bone quantity and quality is present certain forms of bone augmentation are required in order to facilitate future implant placement. This seminar will discuss predictable bone grafting techniques for different situations and areas of the maxilla and mandible. Clinical situations and cases will be shown to demonstrate these grafting techniques.

Dr. Allen Aptekar  studied at the University of Toronto, earning his Bachelors of Science degree in Biology. He received his Doctor of Dental Medicine degree with distinction at the University of Saskatchewan College Of Dentistry. Dr. Aptekar then completed a one year hospital residency at Sunnybrook Health Sciences Center and the University of Toronto. He has authored and co-authored several articles in refereed professional dental journals, and is a lecturer in dental implant procedures for dentists and denturists. He practices in the greater Toronto area, with a special interest and focus on dental implantology.

Art & Technique

A dental restoration is created by Art & Technique. Symbiosis: where one partner lives inside the other (living together). A predictable technique and an artistic inspiration is a perfect symbiosis created by dental technicians in order to achieve outstanding results in challenge cases. The objective of this lecture is to present a systematic approach based on the technician’s expertise, of principles & techniques, in order to obtain predictable results on the implant challenging cases and bonded restoration. Tissue management criteria on the implant restoration with a novel approach for noninvasive pontic site development. Case presentation using art and CAD/CAM technology.

Domenico Cascione MDT, BS obtained his primary education in Bari (Italy), where he was also certified as a Dental Technologist (CDT) in 1985. From 1991 to 2004, he carried out metallurgy research becoming a specialist in dental metallurgy. From 1986 to 2004, he was the owner and director of Dental Laboratory in Bari (Italy). He is a Master Ceramist and also is specialized in metallurgy, implant work and complex esthetic rehabilitation. From 2005 to 2008, he has been Research Associate and Program Director, Advance Training for Dental Technology at the Center for Dental Technology, the University of Southern California School of Dentistry. Since 2009, he became an Adjunct Faculty as a Clinical Assistant Professor at the University of Southern California School of Dentistry. He is also the Director of Case Design Center Laboratory a Division of Burbank Dental Laboratory, located in the University Village in Los Angeles, California. He is a winner of award 2007 Judson C. Hichey in the research category, in the Journal of Prosthetic Dentistry. He is author and co–author of several articles in the literature.

“Esthetics” is a combination of many different things. The word means “concern with or appreciation of beauty.” In dentistry this would include restorative, periodontal, orthodontics, implantology as well as ceramics. The worldwide physical attractiveness phenomenon has taken a major role in both personal achievement and personal success. Yet with the downturn in economy, many dentists are tightening their belts. In spite of that, at the same time, there are new opportunities for those who follow market trends and maintain an open mind about changing their business environment. Capitalizing on these trends offers an opportunity for individuals to create significant incomes by leveraging time.

This program will focus on total overall facial harmony discussing innovative techniques with new restorative products essential to satisfying the growing demand for esthetic smile enhancement as well as enhancing the facial appearance for the aging population.

When it comes to success in business and sales, Pinhas Adar knows that it is all about discipline, practice, accountability and passion. His one-of-a-kind presentations excite Dental and Lab business owners, managers, leaders and teams to the possibilities of how much they can accomplish in a fraction of the time as normal teams. As an entrepreneur, business owner, trainer and motivational speaker, his passion is to spread the word of how to create massive increases in skills, sales, income and team performance in every aspects of life.

This presentation will cover:
- All Ceramic Crown Systems with Combined cases – Assessing and simplifying the mysteries
- Communication – Laboratory, clinician and patient confusion unscrambled for predictable results
- How to increase esthetic dentistry services and products by emphasizing anti-aging therapies.
- The 5 essential principles of developing a new profit model in your practice by leveraging your time.
- How to isolate, identify and manage your #1 asset – Your “Little Voice” and build powerful and lasting confidence

**Pinhas Adar, Master Ceramist** studied in Tel Aviv, Israel and did his residency with Mr. Willi Geller in Zurich, Switzerland. He has thirty years of experience in all phases of dental laboratory technology. He is the founder of Adar International, Inc, a laboratory, educational and research company that is dedicated to setting a new standard in esthetics. He is past president of the Georgia Academy of Cosmetic Dentistry, He was on the PEC board of American Academy of Cosmetic Dentistry as program co–chair for 2011, an active member of the American Academy of Esthetic Dentistry and the International Oral Design group as well as numerous other organizations. He is also a center for Oral Design International. He is on the advisory board of the Amara Institute. He is on the editorial board of several dental journals.

He is a skilled communicator who has the ability to make the complex simple and to teach and inspire. As a speaker, author, and entrepreneur Pinhas has achieved success in empowering both individuals and organizations. This business has opened the door to do what he loves, which is working with people. His purpose is “To Live, Teach, and Empower Greatness.” He is the creator of educational DVD’s, numerous magazine article as well as a contributor to many chapters in dental esthetic publications.
